About Me

I am a passionate IT enthusiast and a student at Kristianstad University, seeking an internship in Web or Mobile Development. I am eager to create innovative solutions that positively impact people's lives. My journey in programming began at the age of 13, driven by a simple yet powerful mindset: "If what you need doesn't exist, build it yourself." Over the years, I have developed my skills in software development, problem-solving, and building user-centric applications.

Technologies

Languages: TypeScript, Swift, Python, JavaScript,

Stack: React, React Query, Docker, TailwindCSS, SwiftUI, FastAPI, Git, WebSockets

Education

Kristianstad University, BS in Computer Science

Sept 2024 - Now

- **Coursework:** Fundamental Programming, Object-oriented Programming in Java, Introduction to Computer Science, Mathematics for Computer Science

Moscow School of Programming, Weekend Training and Professional Orientation

Sept 2019 - May 2022

- **Coursework:** Industrial Programming, Object-orientated Programming in C++, Applications development in C# on the platform .NET, Discrete Mathematics, Computer Networks, Introduction to AI and ML, Programming in GO
- **Achievements:** Led a team of six members (including two each for frontend, backend, and DevOps) to successfully deliver and present the capstone project for an industrial programming course.

Experience

Mobile Developer, Contributor, [Tumble for Kronox](#) - Skåne, Sweden

Sept 2024 - Now

- Developed interactive campus maps, allowing new students to easily locate buildings and navigate to their next class.
- Redesigned the user interface to ensure a cohesive and consistent design across the application.
- Integrated multi-account authentication, streamlining the process for users to switch between accounts effortlessly.
- Designed and implemented lock screen widgets, significantly improving user experience by allowing quick access to upcoming classes directly from the lock screen.

Personal Projects

Grocket - Online marketplace

[View Live](#) | [View on GitHub](#)

- Developed a Web client for the online marketplace that allows users to list goods, manage listings with an archive system, promote items on the search page (integrated Stripe) and chat in real time.
- Implemented real-time chat functionality using HTTP WebSockets, ensuring instant communication between users.
- Deployed the project to the cloud using Docker for containerization and NGINX for efficient load balancing and reverse proxy, ensuring scalable and high-performance deployment.
- Tools Used: React, JavaScript, Tailwind CSS, Docker, NGINX

Credit Assistant - Credit comparison tool

[View Live](#) | [View on GitHub](#)

- Developed a credit assistant to simplify comparing different credit terms, allowing users to save them in a single table for easy comparison.
- Implemented Excel export functionality for the credits table, allowing users to easily download and manage their credit data.
- Tools Used: React, JavaScript, Python, Django, Docker, NGINX

Collabra - Teamwork tool (In progress)

[View on GitHub](#)

- An online task board where teams can assign tasks, discuss them in threads, share files, and visualize deadlines.
- Tools Used: React, TypeScript, React Query, Tailwind CSS, Docker, NGINX

Languages

English (C1), Russian (Native), Swedish (Svenska som andra språk 2)

Hobbies

Hiking, Skiing, City Tourism, Drone Photography
